## PHPIST CUSTOMER REGISTRATION BLOCKER

This module enables you to choose who can sign up in your web shop, which is more flexible and useful if you sell some kind of products that specific customers are not allowed to buy them (e.g. without permission).

It's simple and easy to install, all you need to do is to upload the module via ftp or any other kind of files transfer you use to transfer it into you website, there's another useful way to do it, you need to sign in into the back end of your web shop, from there you can log in into your Prestashop account to install the module directly from their addons.

After installation, you can enter the age you would like your customers to obey, any customer tries to register in your web shop with age under the age you specified in the module will be refused and an error message will be displayed notifying them that they can not sign up.
